# Safety Information

## CAUTION

denotes hazards that could result in minor injury or damage to the machine.

- THIS PRODUCT CONTAINS A LITHIUM BATTERY. DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. REPLACE ONLY WITH THE SAME OR EQUIVALENT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS OF YOUR LOCAL SOLID WASTE OFFICIALS.
- TO REDUCE THE RISK OF SHOCK OR FIRE, USE ONLY NO. 26 AWG OR LARGER TELEPHONE LINE CABLE.
- DISCONNECT ALL POWER TO THE MACHINE BEFORE COVER(S) ARE REMOVED. REPLACE THE COVER(S) BEFORE THE UNIT IS RE-ENERGIZED.

## IMPORTANT SAFETY INSTRUCTIONS

When using your telephone equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

- DO NOT USE THIS PRODUCT NEAR WATER, FOR EXAMPLE, NEAR A BATH TUB, WASH BOWL, KITCHEN SINK OR LAUNDRY TUB, IN A WET BASEMENT OR NEAR A SWIMMING POOL.
- AVOID USING A TELEPHONE (OTHER THAN A CORDLESS TYPE) DURING AN ELECTRICAL STORM. THERE MAY BE A REMOTE RISK OF ELECTRIC SHOCK FROM LIGHTNING.
- DO NOT USE THE TELEPHONE TO REPORT A GAS LEAK IN THE VICINITY OF THE LEAK.
- USE ONLY THE POWER CORD AND BATTERIES INDICATED IN THIS MANUAL. DO NOT DISPOSE OF BATTERIES IN A FIRE, THEY MAY EXPLODE. CHECK WITH LOCAL CODES FOR POSSIBLE SPECIAL DISPOSAL INSTRUCTIONS.

## Safety Information

**CAUTION** denotes hazards that could result in minor injury or damage to the machine.

Do not install the machine near heating or an air conditioning unit.

Avoid exposure to direct sunlight.

Install the machine on a flat surface, leave at least 4 inches (10 cm) of space between the machine and other objects.

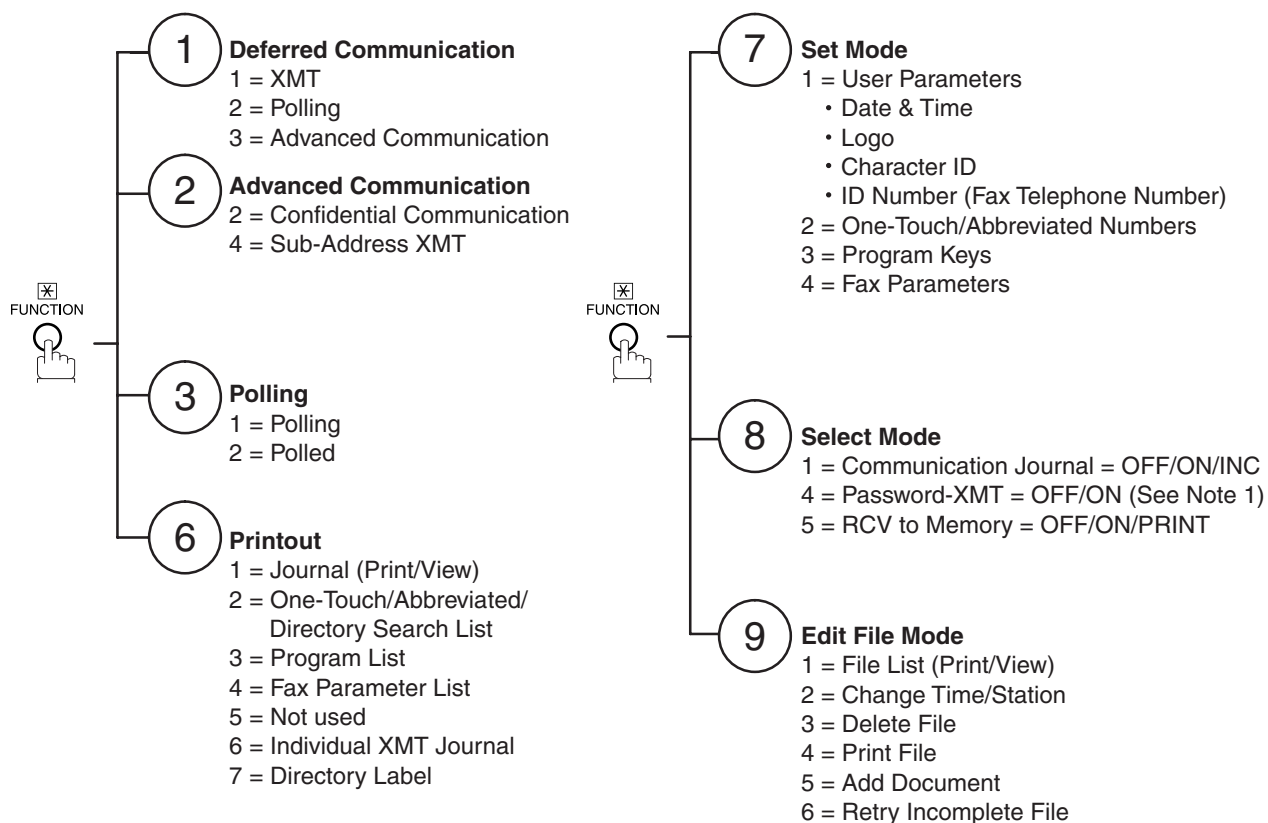

Do not block the ventilation openings.

Do not place heavy objects or spill liquids on the machine.

# Function Key

Any function can be started by first pressing **FUNCTION** and then enter the function number, or by pressing **▼** or **▲** scroll key repeatedly until the desired function appears on the display.

## NOTE

1. If Fax Parameter is not preset to a Valid position, which enables you to use the function, the display will not show the function.

# User Parameters

## General Description

Your facsimile machine has several basic settings (User Parameters) to help you keep records of the documents you send or receive. For example, the built-in clock keeps the current date and time, and your LOGO and ID Number help to identify you when you send or receive documents.

These parameters can be programmed via your PC by using the Configuration Editor included with the Panasonic Document Management System software CD-ROM (included with the machine).

Follow the Operating Instructions included with the Panasonic Document Management System application.

## Setting the Date and Time

# Customizing Your Machine

## General Description

Your facsimile machine has a variety of adjustable Fax Parameters. These parameters, listed in the Parameter Table, are preset for you and do not need to be changed. If you do want to make a change, read the table carefully. Some parameters, such as the Resolution and Contrast parameters, can be temporarily changed by simple key operation just before a transmission is made. When the transmission ends, however, these parameters return to their preset values (Home position). Other parameters can only be changed by the procedure described below.

## Setting the Fax Parameters

Make sure that the FAX/EMAIL lamp is ON. If not, press  to select the "FAX/EMAIL" mode.

- 1**   
- 2**   
- 3** Enter Fax Parameter number from the Parameter Table.  
(See page 29 to 31)  
**Ex:** ① ① ④ for **STAMP** 
- 4**  
- 5** **Ex:** ② for **ON** 
- 6**  

To set another parameter, press **CLEAR** to return to Step 3 or press **STOP** to return to standby.

### NOTE

# Loading Documents

## How to Load Documents

### 1. On the ADF / Inverting ADF

- Place the original(s) Face Up on the ADF until the leading edge placed into the machine stops.

### 2. On the Platen Glass

- Place a book or an original Face Down on the Platen Glass, aligning it with the arrow mark on the original size guides.

## Sending Non-Standard Size Documents

When transmitting non-standard size document(s), the machine may perform Rotate Transmission automatically and not transmit the portion of the document that exceeds the standard size ("P" portion). (See Note 1)

## Flatbed Scanning

Place a book or an original face down on the Platen Glass, then press **ORIGINAL SIZE** to select the original size. The message "ANOTHER ORIGINAL?" is shown on the LCD display when **START** is pressed and the scanning is completed.

- If you wish to store another page, press **1:YES** and place another original, then press **START**.
- If **2:NO** is pressed, the machine starts to dial the telephone number.

### NOTE

1. When an oversized original is sent to another machine, sometimes, it is reduced in accordance with the other party's recording paper size.  
Ex:

# Basic Transmission Settings

## General Description

You can temporarily change the transmission settings either before or after you place the document on the ADF.

These settings are as follows

- Contrast
- Resolution
- Original (Text/Photo)
- Stamp
- Communication Journal
- Password-XMT

After your document(s) have been sent, your machine will automatically return to the preset settings.

## Contrast

Your machine is preset to **Normal** contrast. If you wish to send a document with lighter contrast, change the setting to **Lighter**. If you wish to send a document with darker contrast, change the setting to **Darker**.

Press **LIGHTER** or **DARKER** :

## Resolution

Your machine is preset to **Standard** resolution, which is suitable for most documents. Use **Fine** or **Super Fine** for detailed documents.

Press **RESOLUTION** to:

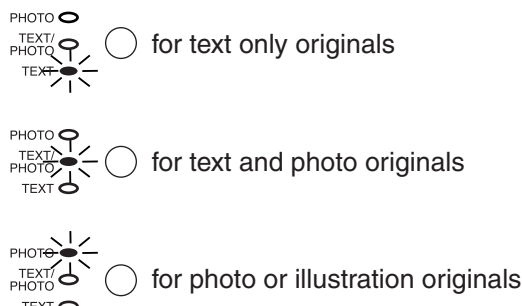

### NOTE

1. To change the preset Contrast position, change the setting of Fax Parameter No. 01. (See page 29)
2. To change the preset Resolution position, change the setting of Fax Parameter No. 02. (See page 29)
3. If you send a photographic original with gray tones, your machine is automatically set the Resolution to FINE or S-FINE (406 x 391 dpi) and the Original setting to Text/Photo or Photo. The reproduction of the received document will be determined by the capability of the remote station.

# Basic Transmission Settings

## Original (Text/Photo)

The Original setting is useful when sending photographs or illustrations with gray tones. Your machine is preset to "TEXT". You can select either "TEXT/PHOTO" or "PHOTO" mode.

## Verification Stamp

The Verification Stamp helps you to confirm successful transmissions by stamping the bottom of each successfully transmitted page with a small ⊗ mark.

### NOTE

1. When you select TEXT/PHOTO, or PHOTO, your machine will automatically select Fine Resolution.
2. When you store a document in memory, the Verification Stamp will stamp on the document if it is successfully stored in memory. In this case the Verification Stamp is not a confirmation that the document was successfully transmitted. If you wish to disable the use of the Verification Stamp when storing document in memory, change the setting of Fax Parameter No. 28. (See page 30)
3. To change the preset Verification Stamp position, change the setting of Fax Parameter No. 04. (See page 29)

## Communication Journal (COMM. JOURNAL)

A Communication Journal lets you verify if the transmission was successful. You can select the condition to print out the Communication Journal as follows.

- When COMM. JOURNAL = **OFF** : a Communication Journal will not print.
- When COMM. JOURNAL = **ON** : a Communication Journal will print automatically after every communication.
- When COMM. JOURNAL = **INC.** : a Communication Journal will print only if the communication has failed.

Make sure that the FAX/EMAIL lamp is ON. If not, press  to select the "FAX/EMAIL" mode.

# Sending Documents

## General Description

You can choose either Memory or Direct Transmission.

Use Memory Transmission if:

- You want to send the document(s) to multiple stations.
- You have to retrieve the document immediately.
- You want to take advantage of Dual Operation design.
- You want to take advantage of Batch Transmission.

Use Direct Transmission if:

- The memory is full.
- You want to send the document(s) immediately.

Use Voice Mode Transmission if:

- You want to send the document(s) after talking with the other party first.
- You want to send the document(s) after listening to a voice prompting.

## Memory Transmission

Your machine quickly stores the document(s) into the machine's memory.

Then, starts to dial the telephone number.

If the transmission fails, your machine will re-transmit the remaining unsuccessful page(s) automatically.

### NOTE

1. While storing the File Number of the document being stored is shown at the upper right corner of the display while storing the document. It is also printed on the Communication Journal (COMM. JOURNAL), Transaction Journal and File List. The percentage of memory used is shown on the lower right corner of the display after each page is stored.

```
* STORE *      NO.003
      PAGES=002  10%
```

```
* STORE * COMPLETED
TOTAL PAGES=005  30%
```

# Sending Documents

## Memory Transmission

2. If memory overflow occurs while storing documents, your machine operation will be stopped at the time and the current and remaining document on the ADF will be left. The machine will show "OUT OF MEMORY" on the display and prompt you whether to transmit the successfully stored documents or to cancel the transmission. Press ① to cancel or press ② to transmit.

OUT OF MEMORY  
INFO. CODE=870

If Fax Parameter No. 082 (Quick Memory XMT) is set to "Invalid", the machine stores all the documents into memory first before transmitting.

After storing each document, the machine checks the available memory to prevent memory overflow and stops storing additional document(s) if the stored data approaches a certain percentage\* (around 80%).

15 PAGES COMPLETED  
DELETE? 1:YES 2:NO

Then the machine dials and sends the memory stored documents first and continues the transmission of the remaining document(s) from the ADF during the same phone call.

If transmitting to multiple stations or if memory overflows while storing a document, the machine prompts you whether to transmit the successfully stored documents or to cancel the transmission. Press ① to cancel or press ② to transmit.

See the Specifications on page 142 for the image memory capacity.

If no action is taken within 10 seconds, the machine will start transmitting the stored documents.

\* The percentage varies and its dependent on the type of documents you are storing, machine settings or whether an optional memory card is installed.

3. An Information Code will be displayed if the transmission has failed or no answer at the receiving side after the last automatic redial.

INCOMPLETE  
INFO. CODE=XXX

The document stored for this transmission will be erased from the memory automatically and the information code is printed for the transmission on the Communication Journal (COMM. JOURNAL).

If you need to retain the incomplete documents even after the last redial, change Fax Parameter No. 031 (INC. FILE SAVE) to "Valid" in advance (See page 30). To retry the incomplete documents, refer to page 85.

4. To stop the transmission, press .

The display shows:

COMMUNICATION STOP?  
1:YES 2:NO

Press ① to stop the transmission. The document you stored will be erased automatically.

If you do not want to erase the documents, change the setting of Fax Parameter No. 31 (INC. FILE SAVE) to "Valid" in advance. (See page 30)

Then the following display will appear and you can select whether to save the file as an incomplete file for editing and retry, or delete the file manually.

SAVE AS INCOMP.FILE?  
1:YES 2:NO

- 5 If you would like to print a Communication Journal (COMM. JOURNAL) after stopping a transmission, press ① when the display shows:

# Receiving Documents

## General Description

Your machine is provided with both automatic and manual reception modes. The selection of either reception mode is made with Fax Parameter No. 017 (RECEIVE MODE).

## Automatic Reception

Your machine will receive documents automatically if the Fax Parameter No. 017 (RECEIVE MODE) is set to "Auto". (See page 29)

## Manual Reception

You may wish to receive documents manually if you use the telephone line in your office primarily as a personal telephone and occasionally for your facsimile machine.

To receive documents manually, change the Fax Parameter No. 017 (RECEIVE MODE) to "Manual" (See page 29) and the following message will be shown on the display.

NOV-12-2000 15:00  
MANUAL RCV 00%

### To receive documents manually

- 1 When the telephone rings, lift the handset. (See Note 1)  
If you hear a beep, the sound tells you that someone wants to send a document.

\* PHONE OFF HOOK \*

- 2 Remove any documents from the ADF.

Your machine starts receiving the document.

ON LINE \* RCV \*

- 4 Hang up the telephone.

### NOTE

1. Your machine requires an optional fax handset or an external telephone connected to the TEL jack on the left rear cover of the machine.
2. If you receive a document with Super Fine resolution (406 pels/inch x 391 lines/inch), it might be divided into multiple pages with no reduction.

## Print Reduction

This machine can use Letter, Legal, A3 or A4 size plain paper for recording. Sometimes, oversized documents sent to you by the other parties cannot be printed within a single page. When this occurs, the document will be divided into separate pages.

This machine is equipped with a Print Reduction function to solve this problem. You may select the most appropriate setting from the selections described below.

### 1. Automatic Reduction

Each page of a received document is first stored in memory. Based on the document length, your machine will automatically calculate the suitable reduction ratio (70% to 100%) to print the entire document on a single page. If the received document is extremely long (over 39% longer than the recording paper), the document will be divided into separate pages and print without reduction.

### 2. Fixed Reduction

You can pre-determine the reduction ratio from 70% to 100% in 1% steps. The document(s) you receive will be reduced to the fixed ratio regardless of size.

## Selecting the Print Reduction Mode

Set Fax Parameters as shown below. (See page 30)

1. To set Automatic Reduction mode.

- a) No. 24 Print Reduction set to "Auto".

2. To set Fixed Reduction mode.

- a) No. 24 Print Reduction set to "Fixed".

- b) No. 25 Reduction Ratio set to any number between 70% through 100%. (See Note 1)

<b>Ex:</b> A4 to A4	- 96%
A4 to Letter	- 90%
Letter to Letter	- 96%
Legal to Letter	- 75%

### NOTE

1. If the sending side is set to print the header on the outside of the copy area, more reduction ratio will be required.

## Receiving Documents

### Receiving Oversize Documents

If the received document is extremely long (over 39% longer than the recording paper), the document will be divided into separate pages. When printing on separate pages, the bottom 13 mm (0.5 in.) of the first page will be overlapped on top of the next page.

Transmitted Document

Received Document

Overlap print.  
13 mm

The receiving document is divided into two sheets with overlap printing.

#### NOTE

1. If the reduction method is set to the Automatic Reduction mode, the document is printed out with no reduction when printing out separate pages. If the reduction method is set to Fixed Reduction mode, the document is printed out by the ratio you set in Fax Parameter No. 25. (See page 30)

### Substitute Memory Reception

If the recording paper runs out or jams or if the toner runs out during reception, the machine automatically starts receiving documents into its image data memory. Stored documents are printed automatically after replacing the recording paper or the toner bottle. (See Note 1 and 2)

- 1** When the machine finishes the memory reception and there is no recording paper or toner, an Information Code appears on the display.

ADD PAPER

TONER IS RUNNING LOW  
TEL ##### U13

- 2** Install the recording paper or replace the toner bottle . The machine will automatically start printing the document stored in the memory.

\* PRINTING \*

#### NOTE

- If the memory overflows, the machine will stop receiving and release the communication line. The document(s) stored in the memory up to that moment will be printed out.*
- If you wish to turn off the substitute reception function, change the setting of Fax Parameter No. 22 to "Invalid". (See page 30)*

# Batch Transmission

## General Description

To reduce transmission time and cost, this feature allows your machine to accumulate different documents for the same destination(s) to be transmitted in a single phone call.

### Real-Time Batch Transmission

During memory transmission, your machine searches its memory for reserved files (up to 5 files) to transmit to the same destination, automatically batching and transmitting them in a single phone call. The following is an example of Real-time Batch Transmission. (See Note 1)

### Delayed Batch Transmission

Assign a time for batch transmission to a Program Key in advance. All transmission(s) using the Program Key are batched and transmitted at the reserved time. The following is an example of Delayed Batch Transmission.

#### NOTE

1. The machine can not Batch to a file(s) that is/are waiting to Redial or is currently being sent, but it will Batch to files that are pending to dial.

# Timer Controlled Communications

## General Description

You can send document(s) to one or multiple stations at any preset time within the next 24 hours. Up to 50 built-in timers can be set for deferred communication.

## General Description

Your machine has a document image memory which enables you to reserve memory transmission, memory deferred transmission, memory polling and so on.

After reserving the communications in memory, you may need to change the settings of the communication(s) while it is still in memory. This section describes how to use the file editing features.

## Printing a File List

The contents of the communication settings may have to be modified or deleted. To verify the contents, follow the steps below to print out a file list.

Make sure that the FAX/EMAIL lamp is ON. If not, press  to select the "FAX/EMAIL" mode.

### NOTE

1. To confirm or change the entered telephone number for the file, see page 78 and 80.
2. If you set Fax Parameter No. 31 to Valid, all incomplete files will remain in the memory. To avoid memory overflow, please check the memory content frequently. We recommend that optional flash memory card is installed when this function is used. See the Operating Instructions (For Copier) page 51.

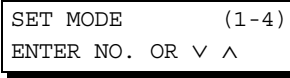

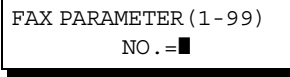

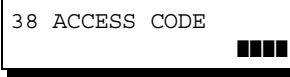

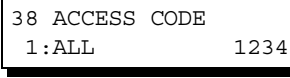

# Access Code

## General Description

The Access Code prevents an unauthorized user from operating the Fax functions of the machine. Once a 4-digit Access Code is registered, no one can operate the machine without entering the correct access code.

Automatic Receiving, however, is always available. After you complete any operation, such as mode setting or transmission, and the display returns to standby, you have to re-enter the access code in order to use the machine again. Registering the Access Code does not affect the use of the machine in any other way.

## Setting the Access Code

# Distinctive Ring Detector (DRD)

## General Description

This function is only effective for companies in countries which offer the DRD Service.

Your machine has a special feature in conjunction with an optional service provided by many local telephone companies. It can distinguish up to 2 telephone numbers with a corresponding ring pattern identifying each number. "DRD" lets you provide multiple phone numbers, one for your fax, business or personal use with only one single phone line.

Please check with your local telephone company on the availability of this service in your area.

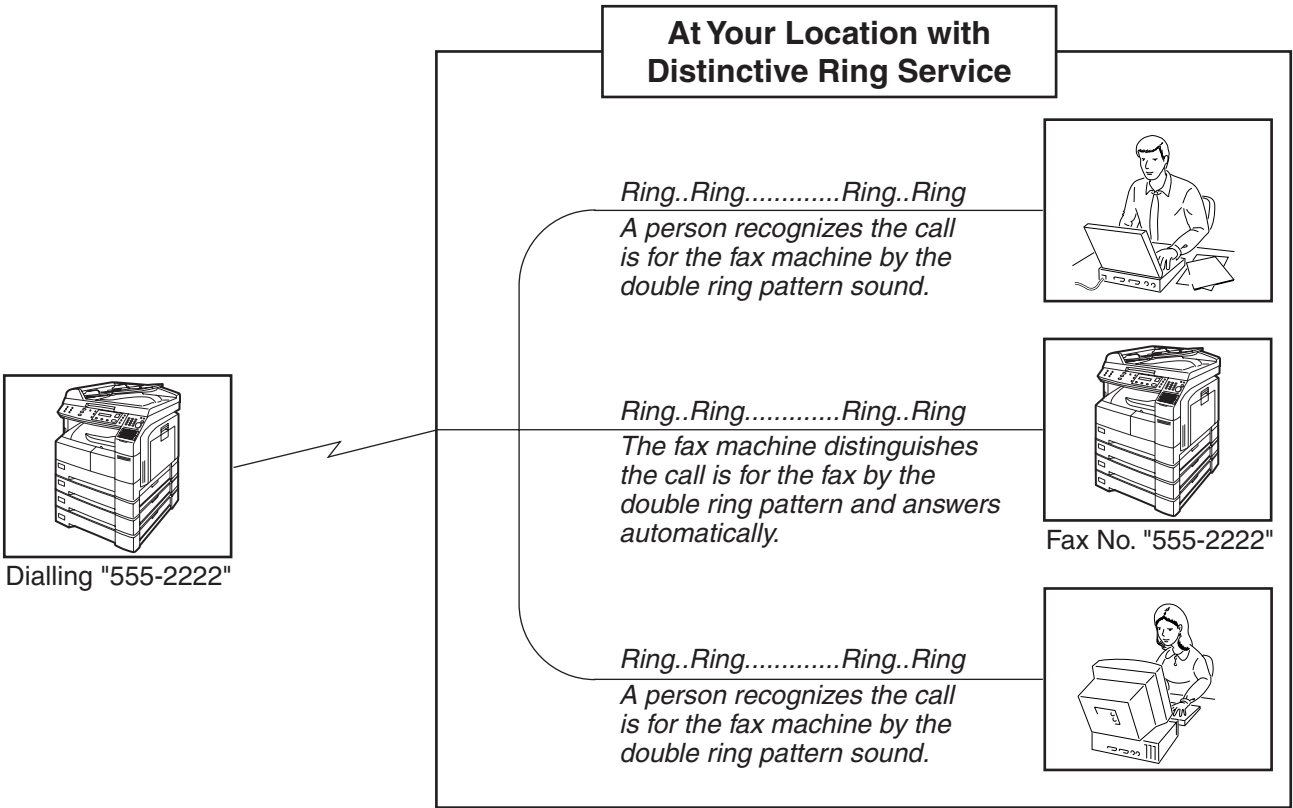

Your machine can be programmed to respond to the specified ring pattern only for the DRD Service. To enable your machine to detect the ring pattern only for fax communication, change the setting of Fax Parameter No. 30 (See page 30).

The following table shows a typical example with 2 telephone numbers on a single phone line.

**Ex:** Specified Ring Pattern = Double Ring

Telephone No.	Usage	Distinctive Ring Sound	Ring Pattern
555-1111	Business	Riiing.....Riiing.....	Standard Ring
555-2222	Fax	Ring...Ring.....Ring...Ring.....	Specified Ring (Double Ring)

The following illustration shows a typical set up, with your machine set to detect Specified Ring (Double Ring).

### NOTE

- 1 "Riiing" means a long ringing sound and "Ring" means a short ringing sound.
2. The specified ring pattern may differ depending on the each country's regulation or specification.

# PIN Code Access

# Password Communications

## General Description

Password Communications, including Password Transmission and Password Reception will prevent your machine from sending a fax to a wrong station or receiving a fax from an unauthorized stations. You can set Password Transmission and Password Reception independently, or both together.

To use Password Transmission, you must set a 4-digit transmission password in advance. The password must be shared with other compatible Panasonic machine(s). If the transmission password in your machine does not match the transmission password in the other compatible Panasonic machine(s), the transmission will fail. You can select password transmission by setting Function 8-4 (PASSWORD-XMT) to "ON" when you send a document.

To use Password Reception, you must set a 4-digit receiving password in advance. The password must be shared with the other compatible Panasonic machine(s). If the password in your machine does not match the receiving password in the other compatible Panasonic machine(s), the reception will fail. Once you set password reception and set the parameter to "ON", it stays until you change the setting to "OFF".

## Compatibility with Other Machines

You can only use password transmission and reception with another Panafax compatible machine(s) listed below.

### Using Password Transmission

7

If your machine's Transmission Password coincides with the other station's Transmission Password, your machine starts sending the document.

When transmission is completed, PASSWORD-XMT returns to standard setting ("**OFF**" or "**ON**").

### Using Password Reception

There is no additional operation required once you set the parameter by following the procedure on page 105. The parameter, "**OFF**" or "**ON**", cannot be selected for each reception. It is always "**OFF**" or "**ON**" until you change the setting.

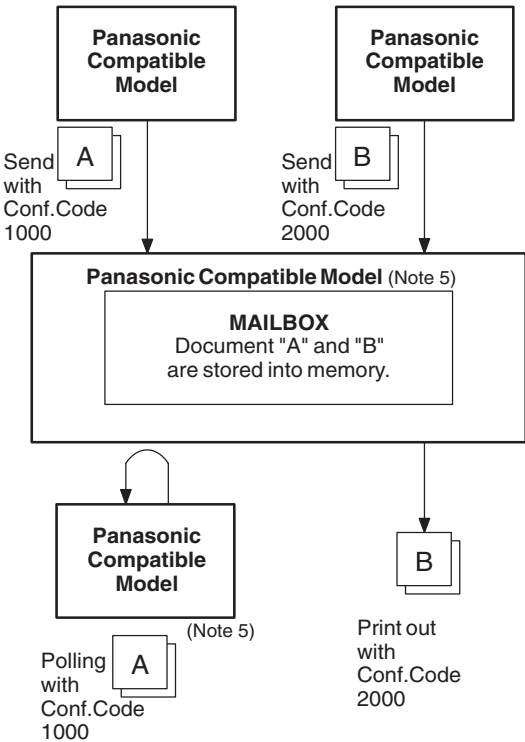

# Confidential Mailbox

## General Description

Your machine is equipped with two Confidential Communication features which ensure that the Confidential information you send is received only by the person with the correct confidential code.

## Confidential Mailbox

The confidential mailbox feature can be used as a mailbox to communicate with other compatible models using a 4-digit confidential code. The Confidential Mailbox feature receives document(s) with a confidential code into memory. These documents can only be printed by the person who has the correct confidential code.

### Compatibility with Other Machines

Table 1 shows a list of compatible Panasonic models which have the Confidential Mailbox feature. It also shows whether or not special settings are required.

**Confidential Mailbox Requirement**

Compatible Panasonic Models								
DF-1100	DP-1810F	DP-2000	DP-2500	DP-3000	DP-3510	DP-4510	DP-6010	DX-600

UF-770	UF-788	UF-790	UF-880	UF-885	UF-890	UF-895	UF-990	

#### NOTE

1. If your machine receives two confidential faxes with same confidential code, both documents are stored together in the same confidential mailbox.
2. Up to 20 Mailbox files can be stored in memory. So, you can receive the confidential fax using 20 different confidential codes.
3. If the memory overflows, the machine will stop receiving and release the line.
4. We recommend that optional flash memory card be installed when this function is used. See the Operating Instructions (For Copier) page 51.
5. If confidential faxes were received in the mailbox of UF-733, you cannot poll those documents. The UF-733 is designed to print out the received confidential document locally only.

## Receiving a Confidential Document to Your Machine's Mailbox

No special setting is required, your machine comes with this feature ready to use. Your machine receives a confidential fax the same way it receives a normal fax message. When receiving the confidential fax, the display shows the following message (CONF. RCV REPORT) and prints out the Confidential Receive Report.

MESSAGE IN MAIL BOX

### Sample CONF. RCV Report

```

# Sub-Addressing

## General Description

The Sub-Addressing function allows you further routing, forwarding or relaying of document(s) to the desired recipient(s) when used in combination with the Networking version of HydraFax/LaserFAX software. This function conforms to the ITU-T recommendation for T. Routing-Facsimile Routing utilizing the Sub-Address.

### Example of a Network

### Compatibility with Other Machines

- Sub-Addressing Transmission: DF-1100/DP-135FP/150FP/150FX/DP-1810F/2000/2500/3000/3510/4510/6010/DX-600/800/1000/2000/FP-D250F/D350F/UF-332/333/342/344/490/550/560/585/595/770/788/790/880/885/890/895/990 (see Note 2)
- Sub-Addressing Reception: DX-600/800/1000/2000 and DF-1100/UF-342/344/550/560/585/595/770/788/880 with PC Interface using the Networking version of HydraFax/LaserFAX software.

### Sub-Addressing Transmission Methods

You can send a document with Sub-Address information to the desired recipient by the following methods.

- By registering the Sub-Address information into One-Touch/ABBR. Dialling Numbers.
- By specifying the Sub-Address information in the Manual Number Dialling Mode.

### Setting of Routing, Forwarding or Relaying

You can customize the Automatic Routing to any combination of LAN (Local Area Network), PSTN (Public Switched Telephone Network) or PBX Extension with HydraFax/LaserFAX Routing Table (please refer to the HydraFax/LaserFAX User Manual).

#### NOTE

1. HydraFax and LaserFAX are trademarks of Wordcraft International Ltd.
2. UF-788 with PC Interface Option or the Option ROM installed.

# Journals and Lists

## General Description

To help you maintain records of the documents you sent and received, as well as lists of the numbers you record, your facsimile machine is equipped to print the following journals and lists: Transaction Journal, Individual Transmission Journal, Communication Journal, One-Touch/Abbreviated/Directory Search No. List, Program List, Fax Parameter List, Directory Sheet and File List.

## Transaction Journal

The "Journal" is a record of the last 100 transactions (a transaction is recorded each time you send or receive a document). It is printed out automatically after every 100 transactions (See Note 1) or you can print or view it manually by using the following procedure:

Make sure that the FAX/EMAIL lamp is ON. If not, press  to select the "FAX/EMAIL" mode.

... variations of print density can  
cause the photocell to generate an analogous electrical video signal.  
This signal is used to modulate a carrier, which is transmitted to a  
remote destination over a radio or cable communications link.

At the remote terminal, demodulation reconstructs the video  
signal, which is used to modulate the density of print produced by a  
printing device. This device is scanning in a raster scan synchronised  
with that at the transmitting terminal. As a result, a facsimile  
copy of the subject document is produced.

Probably you have uses for this facility in your organisation.

Yours sincerely,

*Phil.*

# Troubleshooting

## If You Have Any of These Problems

Mode	Symptom	Cause / Action	Page
During Transmission	Document doesn't feed/multiple feed	1. Check that your document is free of staples and paper clips, and that it is not greasy or torn. 2. Check that your document is the right type to send through an ADF by consulting the list on "Originals You Cannot Send". If your document has the characteristics listed, use the Platen instead. 3. Check that the document is loaded properly.	33
	Does not stamp	Check Fax parameter No. 04 and No. 28 settings.	29 30
	Stamp too light	Replace stamp or refill ink.	139
Transmission Copy Quality	Vertical lines on the transmitted document	Check own copy quality. If copy is OK, your machine has no problem, report to the receiving party that they have a problem. If copy is NG, clean the Document Scanning Area.	---
	Transmitted document is blank		
During Reception	 : Add Paper	Replenish the recording paper.	---
	Recording paper misfeed	Remove the misfed paper. (See Operating Instructions (for Copier) page 41)	---
	Recording paper doesn't advance into machine	Make sure that there is paper in the Paper Cassette. Follow the instructions for loading paper.	---
	Recording paper doesn't eject after printing	Check to see if the recording paper is jammed inside of the machine.	---
	Document auto reduction doesn't work	Check Print Reduction settings.	61
	 : Add Toner	Replace the Toner Bottle.	---
	 : No Waste Toner Box	Install the Toner Waste Container.	---

# Troubleshooting

Mode	Symptom	Cause / Action	Page
Communication	No dial tone	1. Check the telephone line connection. 2. Check the telephone line.	140
	No auto answer	1. Check the telephone line connection. 2. Check the Reception mode setting. 3. If the Fax Parameter No. 013 (AUTO JOURNAL PRINT) is set to "Valid" (default setting) and the machine is printing the received document(s) from memory, which also happens to be the 100th transaction, the machine will not auto answer until the Transaction Journal completes printing.	140 60
	Cannot transmit or receive	An information code will be shown on the display. Refer to the information code table to find the trouble.	137
No Unit Operation	No unit operation	To reset the machine, turn-off the Power Switch for a few seconds then turn it on again.	11

## Information Codes

When something unusual occurs, the display may show one of the Information Codes listed below. These will help you to identify and correct the problem.

### NOTE

- After identifying the problem and verifying the recommended action, if the information Codes keep reoccurring or for help on Information Codes that appear on your machine but are not listed above, please contact your local Panasonic Authorized Dealer.  
(For mechanical failures, see the Troubleshooting section in the Operating Instructions (For Copier) page 46)

## Verification Stamp

The Verification Stamp contains ink. When the stamp mark appears faded or hard to see, the stamp should be replaced or refilled with ink.

### To remove the stamp

Open the ADF unit.

Peel down the Scanning Pad slightly from the left side to expose the Stamp Assembly as illustrated.

1. Remove by pulling the Stamp Assembly upward.

2. Remove the Stamp. Replace the stamp with a new one or refill the stamp with a few drops of the specified ink into the back of the stamp.

Reinstall the Stamp Assembly.

### NOTE

1. Please contact your local Authorized Panasonic Dealer to purchase a new stamp. See page 51 of the Operating Instructions (For Copier) for order number.

# Troubleshooting

## Checking the Telephone Line

If you do not hear a dial tone when the **MONITOR** key is pressed or the incoming call does not ring on your machine (No automatic receive).

**1**

Unplug the Telephone Line Cable from the telephone jack that was supplied by the telephone company.

**2**

Plug a different regular telephone into the same telephone jack.

**3**

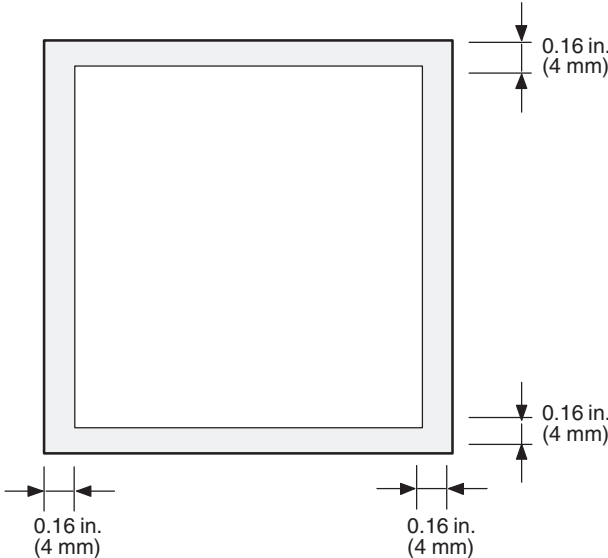

Check for dial tone through the handset. If there is still no dial tone, report it to your local telephone company.

or

Call from another telephone to this number. If the telephone does not ring, report it to your local telephone company.

# Regulatory Information

## Declaration of Conformity (DoC)

"Hereby Matsushita Graphic Communication Systems, Inc./ Panasonic Testing Centre (Europe) GmbH (PTC), declares that this G3 Facsimile equipment is in compliance with the essential requirements and other relevant provisions of the Directive 1999/5/EC"

## Hint:

If you want to get a copy of the original DoC of our products which relates to the R&TTE, please contact to our web address: <http://doc.panasonic-tc.de>.

## Network Compatibility

This product, Model DP-1810F-\*\* (\*\* means country suffixes as table below), is designed as to work with an analogue Public Switched Telephone Network (PSTN) in the each country.

## WARNING

denotes a potential hazard that could result in serious injury or death.

- Plug power supply cord into ordinary AC outlet before connecting telephone line cord. Disconnect telephone line cord before unplugging power supply cord from AC outlet.
- Disconnect the equipment immediately should it ever suffer physical damage which results in the internal parts becoming accessible in normal use. In this instance users should have the equipment repaired or dispose of.
- If the power supply cord and/or telephone line cord of this equipment are damaged, they must be replaced by the special cords supplied by an authorized Panasonic service centre.

## CAUTION

denotes hazards that could result in minor injury or damage to the machine.

- When you know that a thunderstorm is coming, we recommend that you;
  1. Unplug the telephone line cord from the phone jack.
  2. Turn off the power and unplug the power supply cord from AC outlet.
- This equipment may not necessarily provide for the effective hand-over of a call to or from a telephone connected to the same line.
- The operation of this equipment on the same line as telephones or other equipment with audible warning devices or automatic ring detectors will give rise to bell tinkle or noise and may cause false tripping of the ring detector. Should such problem occur, the user is not to contact telecom (telephone company) faults service.

### <For U.K Users.>

This appliance is supplied with a moulded three pin mains plug for your safety and convenience.

A 13 amp fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 13 amps and that it is approved by ASTA or BSI to BS1362.

Check for the ASTA mark  or the BSI mark  on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

IF THE FITTED MOULDED PLUG IS UNSUITABLE FOR THE SOCKET OUTLET IN YOUR OFFICE THEN THE FUSE SHOULD BE REMOVED AND THE PLUG CUT OFF AND DISPOSED OF SAFELY. THERE IS A DANGER OF SEVERE ELECTRICAL SHOCK IF THE CUT OFF PLUG IS INSERTED INTO ANY 13 AMP SOCKET.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt please consult a qualified electrician.

**WARNING : THIS APPLIANCE MUST BE EARTHED.**

**IMPORTANT:** The wires in this mains lead are coloured in accordance with the following code:

Green and Yellow	: Earth
Blue	: Neutral
Brown	: Live

As the colours of the wires in the main lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured GREEN-AND YELLOW must be connected to the terminal in the plug which is marked by letter E or by the safety Earth symbol "⏏" or coloured GREEN or GREEN-AND-YELLOW.

The wire which is coloured BLUE must be connected to the terminal in the plug which is marked with the letter N or coloured BLACK.

The wire which is coloured BROWN must be connected to the terminal in the plug which is marked with the letter L or coloured RED.

How to replace the fuse.

Open the fuse compartment with a screwdriver and replace the fuse.

## Regulatory Information

### <For Germany Users>

Machine Noise Information Ordinance 3. GSGV, January 18, 1991: The maximum sound pressure level is equal or less than 70 dB(A) according to ISO 7779.

### <For New Zealand Users>

Different characteristics of the equipment at the other end of the call, and/or variations in line conditions, may mean that it will not always be possible to communicate at the higher speeds for which this machine has been designed. Neither Telecom or Panasonic New Zealand can accept responsibility should this situation arise.

### IMPORTANT NOTICE

Under power failure conditions, this telephone may not operate. Please ensure that a separate telephone, not dependent on local power, is available for emergency use in emergencies.

This equipment should not be used under any circumstances which may constitute a nuisance to other Telecom customers.

This equipment shall not be set to make automatic calls to the Telecom '111' Emergency Service.

Not all telephones will respond to incoming ringing when connected to the extension socket.

### <For European Countries>

As an ENERGY STAR® Partner, Panasonic has determined that this product meets the ENERGY STAR® guidelines for energy efficiency.

This voluntary program specifies certain energy consumption and usage standards. This product will automatically "power down" after a specified period of non-use. The use of this ENERGY STAR® compliant product will reduce energy consumption and ultimately benefit the environment.

The default functions can be adjusted depending on your office requirements. Please ask your authorized Panasonic dealer for more details.

# Glossary

<b>ADF (Automatic Document Feeder)</b>	The mechanism that delivers a stack of document pages to the scanner one page at a time.
<b>Automatic reception</b>	The mode that allows you to receive fax documents without user intervention.
<b>Auto print reduction</b>	The method of automatically reducing a received document so that it can be printed onto a standard size piece of plain paper. For example, your machine will reduce an incoming legal size page to 75% of its original size so it could fit on a letter size page.
<b>Batch Transmission</b>	The ability to accumulate different document files for the same destination(s) to be transmitted in a single phone call.
<b>BPS(Bits Per Second)</b>	The amount of data that is transmitted over the phone line. Your machine can start at each Max. Modem speed and automatically steps down to suitable speed depending on the phone line condition and the receiving machines capabilities. (Max. Modem Speed is 33.6 kbps)
<b>C.C.I.T.T.</b>	Consultative Committee on International Telegraph and Telephone. This organization has presently developed four groups of industry standards that insure facsimile compatibility.
<b>Character ID</b>	A programmed proprietary code name that allows up to 16 alphanumeric characters identifying your facsimile machine.
<b>Coding scheme</b>	The data compression method used by facsimile machines. Your machine utilizes Modified Huffman (MH), Modified Read (MR) and Modified Modified Read (MMR) coding schemes.
<b>COMM. JOURNAL</b>	Refers to either the Communication Journal, Relay Transmission Report, or the Confidential XMT Report.
<b>Confidential RCV Report</b>	The report that gives you information about a confidential document(s) that is held in your machine's memory.
<b>CONTRAST</b>	Signifies the scanning sensitivity in terms of lightness and darkness of your original transmitting pages.
<b>Cover Sheet</b>	A Fax Cover Sheet can be attached to your transmit document(s) that shows the recipient's name, originator's name and number of pages attached.
<b>DDD (Direct Distance Dialling)</b>	A telephone service that allows unassisted dialling, no operator assistance is required.
<b>Deferred polling</b>	The ability to retrieve documents from other stations at a later time.
<b>Deferred transmission</b>	The ability to send documents to other stations at a later time.
<b>Department Code</b>	This operation require the user to input a preset 4-digit Department Code before transmission. The Department Name of selected Department Code is printed on the Header of each page sent, Cover Sheet, Comm. Journal and Individual Transmission Journal.
<b>Direct Dialling</b>	The method of dialling where you enter the entire telephone number through the keypad.
<b>DTMF(Dual Tone Multi-Frequency)</b>	Dialling method that sends a different set of frequencies for each digit of the telephone keypad. Commonly refers to touch tone dialling.
<b>Duplex Scan</b>	The ability to scan both sides of 2-sided original(s) for transmission.
<b>ECM (Error Correction Mode)</b>	The ability to correct transmission errors as detected during the transmitting phone call.
<b>End receiving station</b>	In a relay network, the final station designated to receive the document.
<b>FAX Parameter List</b>	The list that contains the home FAX parameters settings that you have programmed into your machine.
<b>File</b>	A task that has been stored into the memory of your unit. Examples are deferred transactions.

# Glossary

<b>Fixed print reduction</b>	The method that allows you to determine one reduction rate, such as 75%, for all incoming documents.
<b>FUNCTION</b>	The control panel key that will be utilized to begin an operation or configuration of a feature.
<b>G3 mode (Group 3)</b>	Refers to the standards and transmission capabilities of the current generation of facsimile machines.
<b>Group dialling</b>	The ability to program many telephone numbers into a single station so that many locations can be dialled in sequence utilizing a single keystroke.
<b>Handshaking</b>	The exchange of a group of control signals that communicate between the transmitter and receiver. These signals determine the condition at which communication can occur.
<b>Header</b>	A row of information that is transmitted by the sending machine and printed on the top of each page by the receiving unit. This identifies the transmitting unit and information about the transmission, such as time and date.
<b>ITU-T</b>	International Telecommunication Union - Telecommunication, formerly known as C.C.I.T.T.
<b>ITU-T Image No.1</b>	An industry standard document that allows comparisons of the transmission speeds and capabilities of facsimile machines.
<b>ID</b>	A programmable address of up to 20 digits identifying your machine.
<b>Image memory capacity</b>	This signifies the amount of memory available in your unit capable of storing pages of documents. All page units of measure are based on the ITU-T Image No.1.
<b>Individual Transmission Journal</b>	A report that is printed by the transmitting unit stating information regarding the last document transaction.
<b>Information code</b>	A code that is internally generated by your Fax stating a specific operational error or machine failure.
<b>Initial sending station</b>	In a relay network, the station that is originating the document transmission.
<b>Journal</b>	A report that is printed by your unit listing the last 100 transactions.
<b>Keypad</b>	A group of numeric keys located on your control panel.
<b>LCD</b>	Liquid Crystal Display. The display area of your machine.
<b>Manual reception</b>	A mode that requires operator intervention to receive an incoming document.
<b>Memory transmission</b>	The documents are scanned into memory before actual connection to the phone line for transmission.
<b>Modem</b>	A device that converts signals from your fax machine into signals that can be transmitted over telephone lines.
<b>Multi-station transmission</b>	The ability to broadcast the same set of documents to a programmed number of locations.
<b>Off-hook dialling</b>	The direct dialling of a telephone number with the handset out of the cradle or "off the hook."
<b>On-hook dialling</b>	The direct dialling of a telephone number with the handset in the cradle or "on the hook."
<b>One-Touch dialling</b>	The ability to dial an entire telephone number by pressing one key.
<b>Overlap Printing</b>	Documents too long to be reduced are automatically printed on two pages with approximately 10 mm overlap.
<b>Panasonic Super Smoothing</b>	An electronic image enhancement (Panasonic Super Smoothing) that will create a particular pattern for the improvement of copy quality.
<b>Photo</b>	A scanning technique to distinguish levels of gray from black and white. Your machine can detect up to 256 levels of gray in photo mode.
<b>Polling</b>	The ability to retrieve a document from another facsimile machine.
<b>Polling password</b>	A 4-digit programmed code that enables the security of a document being polled.

<b>Print reduction modes</b>	The methods used to determine how an incoming document will be reduced to print onto the paper loaded in your machine.
<b>Program keys</b>	Keys that are defined for storing a sequence of stations to be dialled or polled.
<b>Protocol</b>	A protocol is the special set of rules for communicating that the end points in a telecommunication connection use when they send signals back and forth. Both end points must recognize and observe the protocol.
<b>PSTN</b>	Public Switched Telephone Network. Network of interconnected switching equipment and transmission facilities.
<b>Receiving password</b>	A 4-digit password that is checked before a document is received.
<b>Relay Transmission Report</b>	A report that contains information regarding the last document transmission to a relay station.
<b>Rotation XMT</b>	The document is set as (←□), the image is rotated by 90° and then transmitted as (←□).
<b>Selective reception</b>	A function that can be set so that your unit will receive from only those machines programmed into your dialler.
<b>Station name</b>	Alphanumeric ID which can be programmed for each One-Touch dialling and Abbreviated dialling number.
<b>Stored originals</b>	Documents that have been scanned and now are stored in your machine's memory.
<b>Sub-address</b>	ITU-T recommendation for further routing, forwarding or relaying of incoming faxes.
<b>Sub-address Password</b>	ITU-T recommendation for additional security that corresponds to the Sub-address.
<b>Substitute memory reception</b>	Your machine's ability to store an incoming document into its memory, when it runs out of recording paper or toner.
<b>Transmission reservation</b>	The ability to preset a telephone number so that you may reserve a transmission while your unit is performing another function.
<b>Transmission password</b>	A 4-digit password that is checked when a document is transmitted.
<b>User parameter</b>	Programmed parameters that provide information to other stations. Examples are logo, character ID, date and time.
<b>Verification stamp</b>	A user selectable transmission verification stamp can be placed on scanned documents that are successfully transmitted or stored in memory.
<b>View Mode - File List</b>	Allows you to view the brief contents of the memory files through the LCD display without having to print the Memory File List.
<b>View Mode - Journal</b>	Allows you to view the brief contents of the journal through the LCD display without having to print the journal.

Dear Pete,

Permit me to introduce you to the facility of facsimile transmission.

In facsimile a photocell is caused to perform a raster scan over the subject copy. The variations of print density on the document cause the photocell to generate an analogous electrical video signal. This signal is used to modulate a carrier, which is transmitted to a remote destination over a radio or cable communications link.

At the remote terminal, demodulation reconstructs the video signal, which is used to modulate the density of print produced by a printing device. This device is scanning in a raster scan synchronised with that at the transmitting terminal. As a result, a facsimile copy of the subject document is produced.

Probably you have uses for this facility in your organisation.

Yours sincerely,

*Phil.*
